ABOUT ME

I have been interested in computer technologies since childhood and have developed various skills in this field. At a young age, I gained experience in technical areas such as setting up servers and port forwarding. I strive to achieve high-quality results by completing the projects I start with enthusiasm and determination. I have a strong interest in server administration, game development, and software programming. In the future, I hope that the programs I develop will become widely recognized and used.

SKILLS

- Python
- JavaScript
- HTML/CSS
- C/C++

CERTIFICATES

Aygaz Makine Öğrenmesi Bootcamp: Yeni Nesil Proje Kampı

MY PROJECTS

- **Facial Expression Based Cursor Control**

FaceCursor is a Python project that enables mouse control by tracking facial movements over a webcam. Face tracking is done using OpenCV and facial movements are converted into mouse movements with the pyautogui library.

- **Spam Classification Supervised Unsupervised**

A machine learning project for email spam detection using both supervised (Logistic Regression, Decision Trees) and unsupervised (Mini Batch k-Means) learning algorithms.

- **kubicord - peer-to-peer chat application**

Kubicord is a simple peer-to-peer chat application built using WebRTC and WebSocket for real-time communication. This application enables users to exchange messages through a direct peer-to-peer connection, facilitated by a signaling server using WebSocket.

- **kurebiad - manga reader app**

kurebiad is a desktop manga reader application designed to allow you to enjoy locally stored manga chapters with a user-friendly interface. Built using Electron, JavaScript, HTML, and CSS, Kurebiad supports structured manga directories and provides smooth chapter navigation.

STUDY

Nişantaşı University   2021-…
Computer Engineering - 4th Grade

YAPAY ZEKA VE TEKNOLOJİ AKADEMİSİ
2024-2025 Scholar

IOS & Swift – The Complete iOS App Development Bootcamp
